

PUBLICATION OF THE NORTH CAROLINA DEPARTMENT OF COMMERCE - DIVISION OF TOURISM, FILM AND SPORTS DEVELOPMENT

June 2009

Strategic tourism marketing and policy decisions depend on accurate, consistent tracking of business indicators such as lodging statistics, attraction and welcome center visitation, transportation statistics and more. The intent of the North Carolina Travel Tracker is to provide up-to-date and relevant tourism indicators for both the state and individual regions within the state. With data from the Travel Tracker, program areas and industry partners can strategically plan, implement and evaluate processes and programs.

The following report analyzes a variety of tourism indicators by 1) State, 2) the three geographic marketing regions (coastal, piedmont and mountain), and for some indicators 3) the seven economic development regions. As well as providing a review of the current state of business, the report provides a year-to-date analysis and comparisons to previous years where applicable.

With regards to the lodging data found in this report; while virtually every chain in the United States provides Smith Travel Research (STR) with data on almost all of their properties, there are still some hotels that don't submit data. However, every year STR examines listings and directories for information on hotels that don't provide data. STR calls each hotel in the database every year to obtain "published" rates for multiple categories. Based on this information all hotels are grouped - those that report data and those that don't - into groupings based off of price level and geographic proximity. They then estimate the non-respondents based on nearby hotels with similar price levels.

Following is a guide to charts and graphs for this report:

Section 1 - Statewide Tourism Indicator Analysis for June 2009

- Chart 1 Hotel/Motel Occupancy in North Carolina June 2006 2009
- Chart 2 Hotel/Motel Average Daily Room Rate in North Carolina June 2006 2009
- Chart 3 Hotel/Motel Revenue per Available Room in North Carolina June 2006 2009
- Chart 4 Hotel/Motel Room Demand in North Carolina June 2006 2009
- Chart 5 North Carolina Lodging Statistics Monthly Percent Change 2008 2009
- Chart 6 Statewide Visitation to Attractions June 2006 2009
- Chart 7 Statewide Visitation to Attractions Monthly History 2006 2009
- Chart 8 State Welcome Center and Local Visitor Center Attendance June 2006 2009
- Chart 9 Statewide National and State Park Visitation June 2006 2009
- Chart 10 Statewide Visitation to State Parks Monthly History 2006 2009
- Chart 11 Statewide Visitation to National Parks Monthly History 2006 2009
- Chart 12 Statewide Airport Arrivals and Departures June 2006 2009
- Chart 13 Lower Atlantic Average Monthly Retail Gas Prices for Unleaded June 2006 2009
- Chart 14 North Carolina Average Temperature and Precipitation June 2008 2009

Section 2 – Geographic Marketing Region Tourism Indicator Analysis for June 2009

- Chart 15 Hotel/Motel Statistics by Geographic Region June 2009
- Chart 16 Hotel/Motel Room Demand by Geographic Region June 2009
- Chart 17 Visitation to Attractions and Parks by Geographic Region June 2009
- Chart 18 State Welcome Center and Local Visitor Center Attendance by Geographic Region June 2009
- Chart 19 Airport Arrivals and Departures by Geographic Region June 2009

Section 3 – Economic Development Region Tourism Indicator Analysis for May 2009

- Chart 20 Hotel/Motel Statistics by Economic Development Region June 2009
- Chart 21 Hotel/Motel Room Demand by Economic Development Region June 2009

Section 4 – National Travel Price Index

Chart 22 - National Travel Price Index December 2006 – June 2009

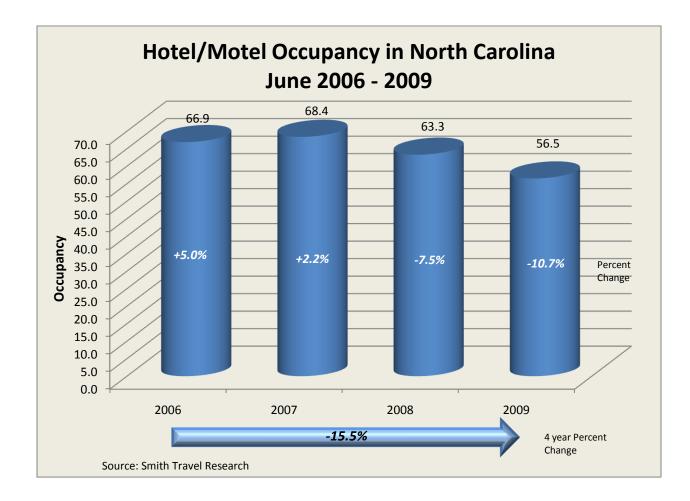

Chart 1 provides a comparison over a four year period to show the trend of occupancy in the state for the month of June. Occupancy for June has been declining sharply over the past two years. Occupancy at the national level also experienced a large decrease in June 2009. It was down – 9.7% from the previous June.

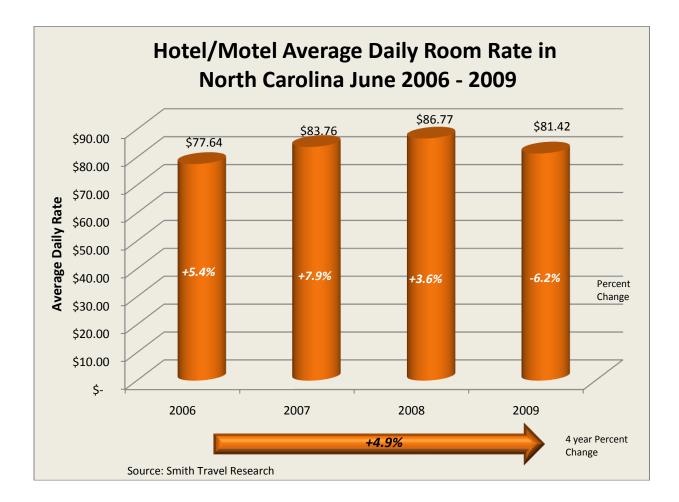

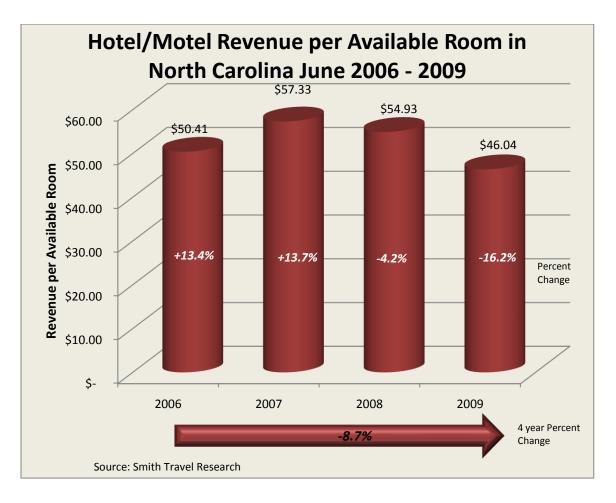

Chart 2 provides a comparison over a four year period to show the trend of average daily room rate (ADR) in the state for the month of June. The ADR for past years have shown a steady increase however this June experienced a significant decline (though still above 2006 rates). *ADR at the national level was down -9.9% in June 2009 from the previous June.*

In Chart 3 an analysis of Revenue per Available Room (RevPAR) is provided. RevPAR is an industry term that describes the revenue that a hotel earns on the basis of just the rooms available for a given night. In other words, rooms not available either due to renovation or other reasons are not included in this equation. Mathematically, RevPAR can be determined dividing total room revenue by rooms available (occupancy times average room rate will closely approximate RevPAR). As with previous charts, Chart 3 shows a comparison over a four year period to show the trend of RevPAR in the state for the month of June. As with the ADR, RevPar was down significantly for June 2009 relative to the previous year, and below 2006 RevPAR. *RevPAR at the national level was down -18.6% in June 2009 from the previous June.*

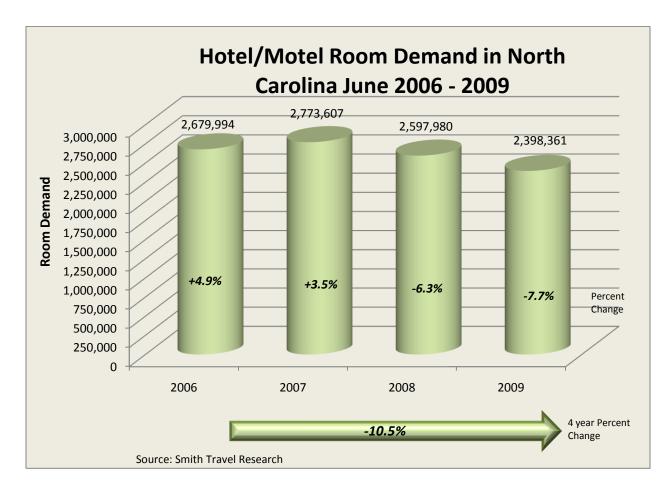

Chart 4 depicts hotel/motel demand for the month of June 2009 with comparisons to the previous three years. Demand is the number of rooms sold excluding complimentary rooms. Room Demand for June was down -7.7% from June 2008. *Room Demand at the national level also saw a decline with a -8.0% change in May 2009 from the previous May.*

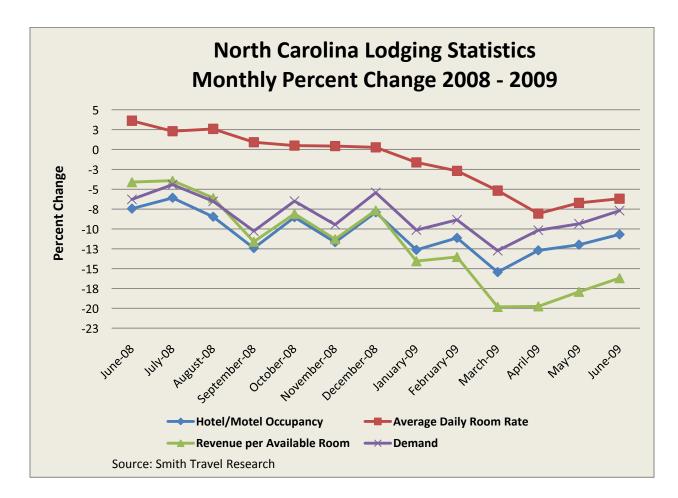

Chart 5 provides a monthly percent change for the four major lodging indicators. The chart allows for a 13 month trend-line analysis that clearly depicts that the major indicators show a steady negative change. All indicators have dropped to negative percent change since January of 2009. RevPAR is particularly low. Though slightly better than May, all indicators in June 2009 still showed significant negative percent change.

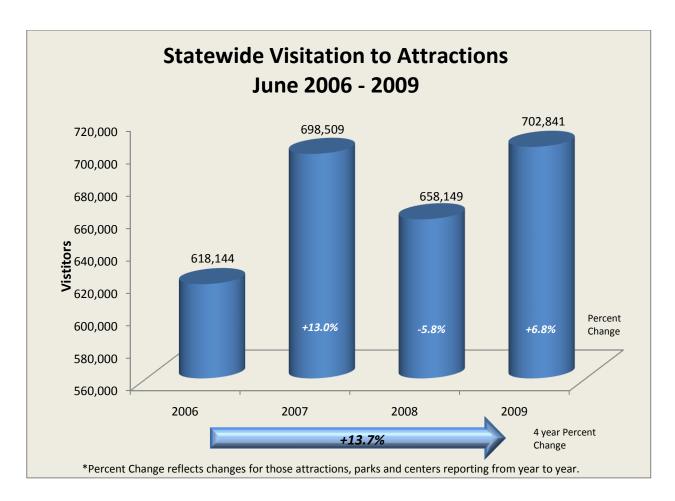

Chart 6 provides a status of the attractions industry in North Carolina for the month of June for the last four years. The numbers represent only a sample of North Carolina attractions that provide their attendance data, and are not intended to be considered a complete list of attractions. However, the wide variation of type and location of the participating attractions allow for a valid aggregate trend analysis on a monthly basis, particularly when tracking percent change. Missing values for attractions who regularly report have been estimated until visitation can be verified. These estimates are not included in percent change calculations from June 2008 to June 2009.

Unlike the significant decline in hotel/motel occupancy and demand during June 2009 (as shown in previous graphs), there was an increase in attraction attendance for June 2009 from June 2008. Attendance is still well above 2006 levels.

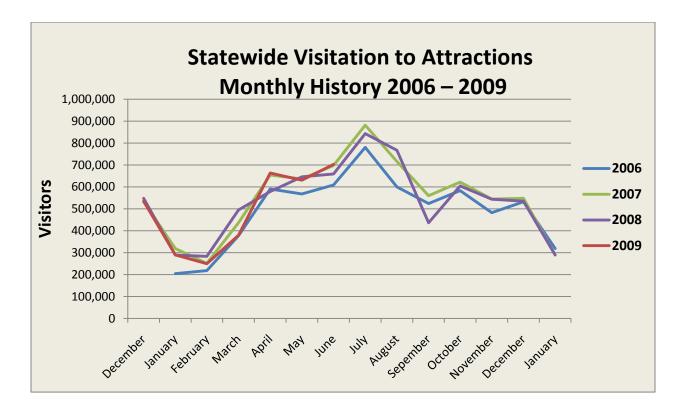

Chart 7 shows a monthly trend of attraction visitation for each of the last four years. This chart allows for a view of the ebb and flow of monthly attraction attendance, while also providing a look at how attendance compares to the same month of the previous years. Not surprisingly, the summer months see higher visitation numbers at statewide attractions. However, it is helpful to view how visitation is allocated by month for strategic planning purposes.

Again, the numbers represent only a sample of North Carolina attractions that provide their attendance data, and are not intended to be considered a complete list of attractions. However, the wide variation of type and location of the participating attractions allow for a valid aggregate trend analysis on a monthly basis.

The June numbers are slightly hired than 2007 levels and are at a four year high.

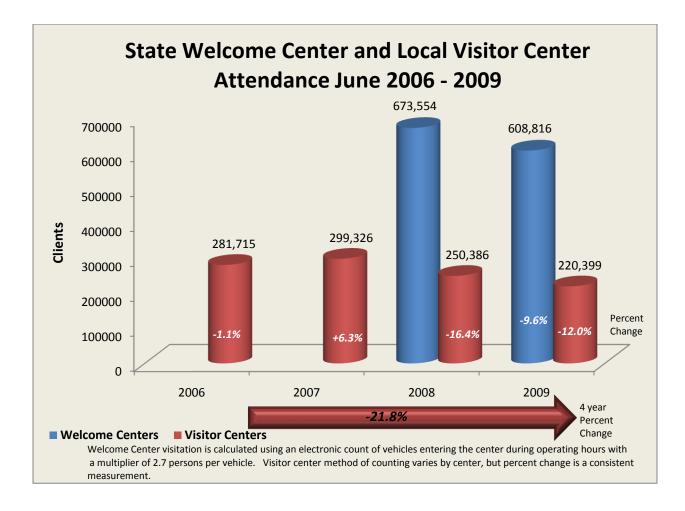

Chart 8 provides June visitation statistics for State Welcome Centers, as well as Local Visitor Centers throughout North Carolina. It should be noted that while there is a percent change indicated for welcome centers for 2008-2009, this was the first year a percent change could accurately be provided. The NCDOT spent several years changing the counting mechanism at the state welcome centers making comparisons between years inaccurate from the time the DOT began installation until September 2008. Therefore, previous year's numbers are not included in this particular chart.

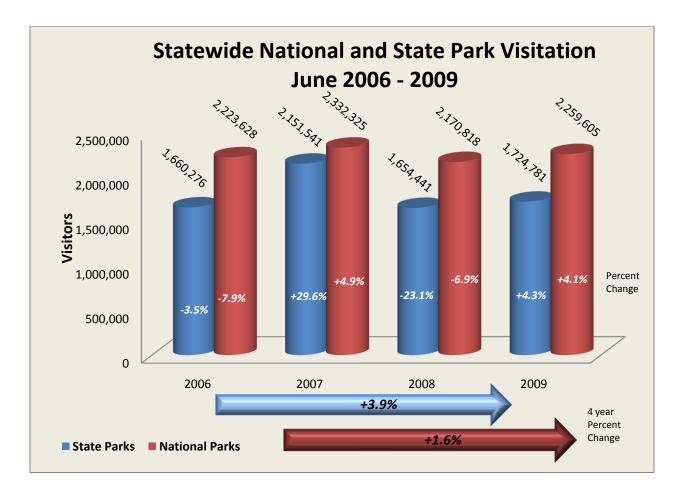

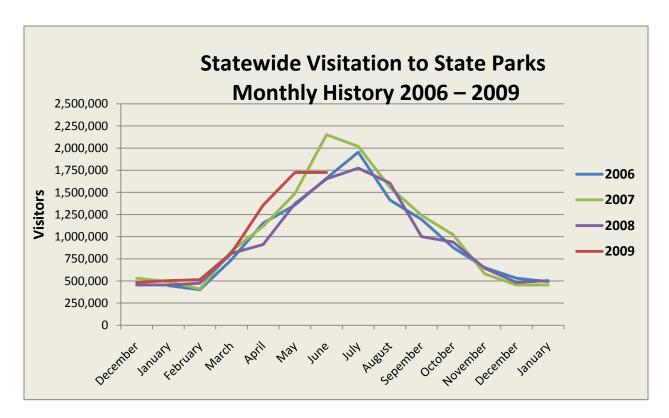

Chart 9 depicts visitation to state and national parks in North Carolina for the last four Junes. Both state and national parks visitation have increased over the past year. Even though there was a decrease in visitation from June 2007 to June 2008, there has been an overall increase over the past four years.

Similar to Chart 7, Charts 10 and 11 provide a monthly trend of state and national park visitation for each of the last four years. These charts help monitor the flow of monthly attraction attendance, while also providing a look at how attendance compares to the same month of the previous years. It is important to note that there are many extraneous variables that can affect visitation at attractions, and particularly at outdoor attractions. Weather, temperature and holidays are variables that should be noted when viewing unusual highs or lows in attendance.

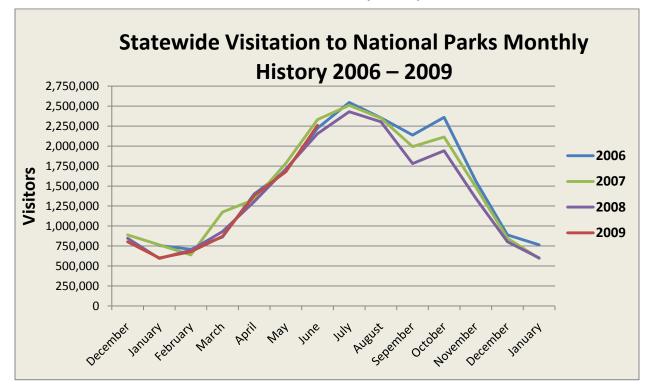

Chart 11 – Statewide Visitation to National Parks Monthly History 2006 – 2009

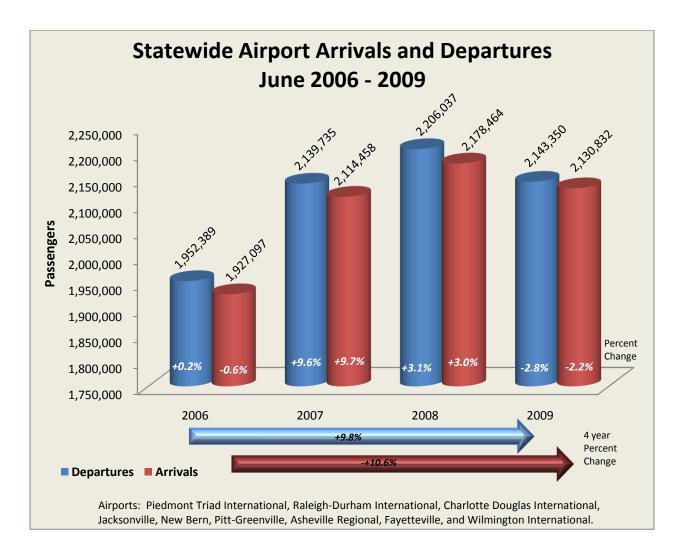

Chart 12 shows June airport arrivals and departures for each of the previous four years. There was a significant increase overall for June arrival and departures over the past four years. However, there was a slight decline for both from June 2008 to June 2009.

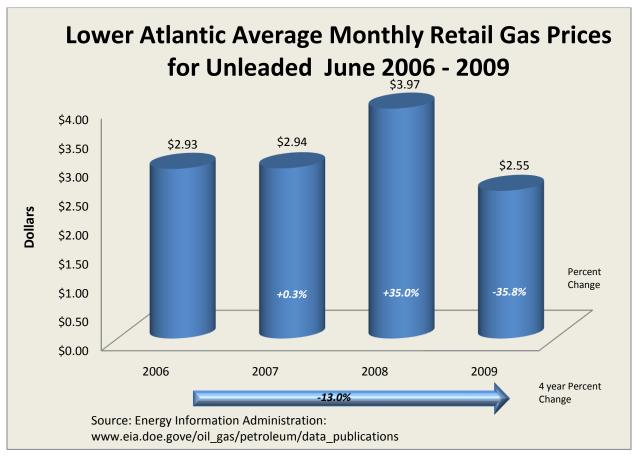

Chart 13 provides the average price per gallon of unleaded gasoline for June 2009 and the three previous Junes. The data provided above, when compared with other indicators such as attraction attendance and visitor spending data, can be very helpful in the analysis of general travel trends.

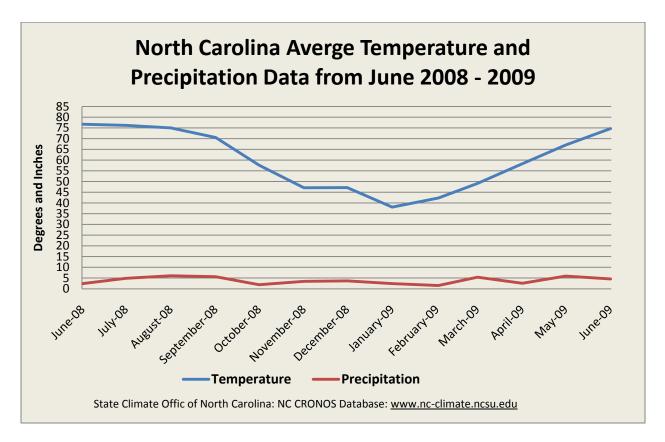

Chart 14 provides 13 months of air temperature and precipitation. This data, when analyzed together with gas price data and other tourism indicators, can be valuable in determining possible reasons for significant increases and/or decreases in indicators. For instance, greater than normal precipitation during a particular month can often help explain decreases in attendance at outdoor attractions. June 2009 had a slightly lower average temperature than the previous June, but a higher precipitation.

Section 2 – Geographic Marketing Region (Coastal/Piedmont/Mountain) Tourism Indicator Analysis for June 2009

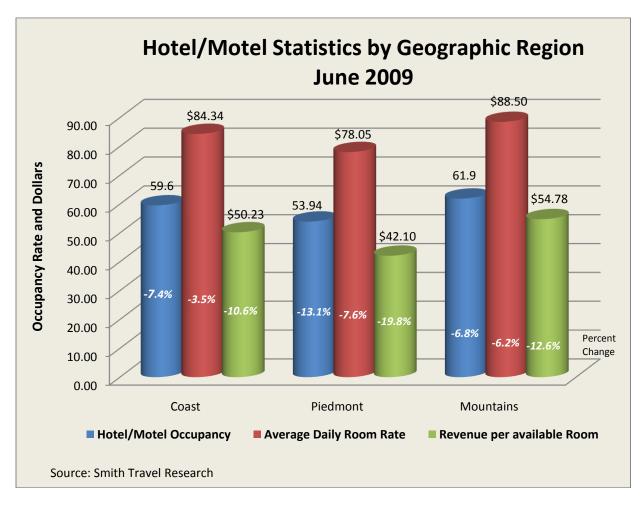

Chart 15 provides a one year comparison in lodging statistics for the three geographic marketing regions of North Carolina. Occupancy rate in 2009 decreased significantly in all three regions. The Coastal Region had the smallest percent change in occupancy levels. The largest ADR and RevPAR negative percent change from June 2008 was in the Piedmont Region while the Coastal Region had the smallest negative percent change in ADR and RevPAR.

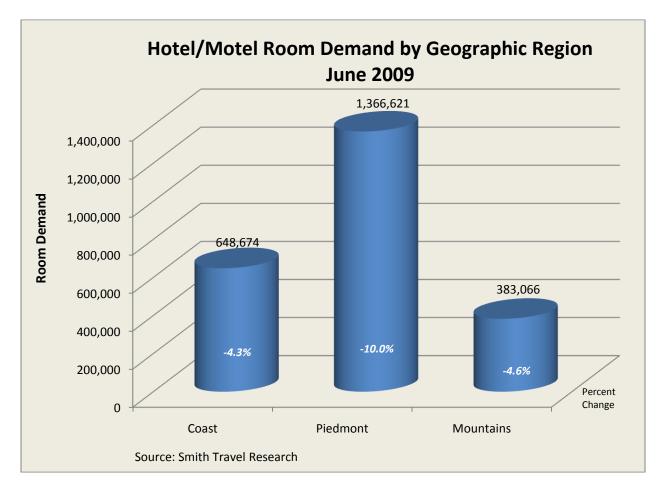

Chart 16 provides hotel/motel demand by geographic region for June 2009. Demand differs from occupancy in that it is the total number of rooms sold, not accounting for differences in room supply. The Piedmont Region experienced the largest percent change decline in demand from June 2008 to June 2009, and while that region clearly holds the largest volume of rooms in the state, the effect of decreased occupancy on the entire state is great.

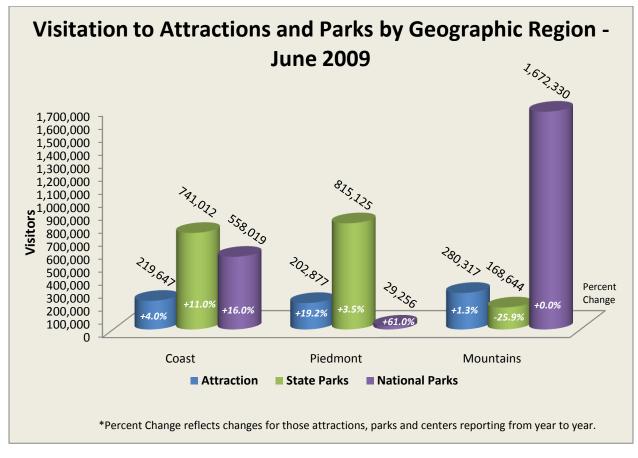

Chart 17 provides a look at the attractions industry in North Carolina in June 2009 by geographic region. As with the statewide numbers, the following data represents only a sample of North Carolina attractions that provide their attendance data, and are not intended to be considered a complete list of attractions. However, the wide variation of type and location of the participating attractions allow for a valid aggregate trend analysis on a monthly basis.

There was an overall increase in visitation for attractions in each region and for national parks in the Coast and Piedmont in June 2009. State parks saw a positive growth in visitation in the Coastal and Piedmont Regions, but the Mountain Region saw a significant decline.

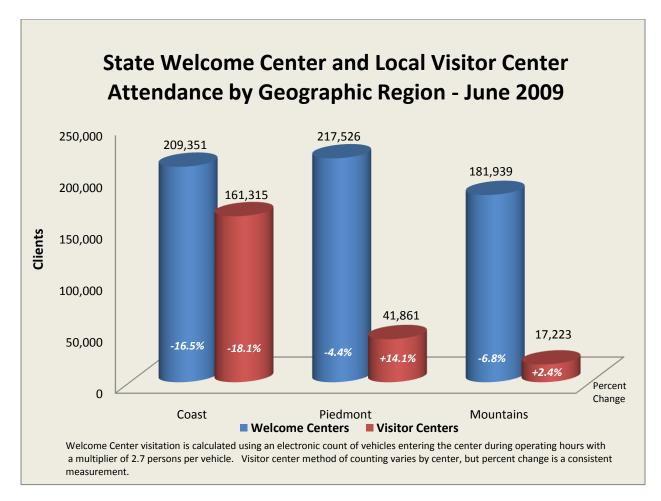

Chart 18 shows welcome center and visitor center attendance by geographic region and offers comparisons from June 2008. Even though welcome centers reflected a decrease in numbers, Piedmont and Mountain Regions visitor centers saw an increase in growth during the month of June.

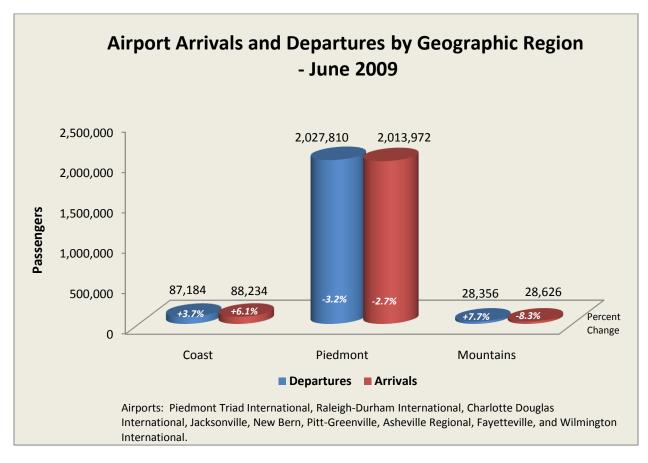

Chart 19 provided a breakdown of air travel statistics by geographic region. While the majority of air traffic is through the Piedmont Region, it is helpful to maintain a trend of other regional airport usage. The Piedmont Region experienced a drop in air traffic during the month of June, while the Coastal and Mountain Region experienced an increase.

Section 3: Economic Development Region Tourism Indicator Analysis - June 2009

The seven economic regions include:

- 1 Northeast (Bertie, Camden, Chowan, Currituck, Gates, Halifax, Hertford, Northampton, Pasquotank, Perquimans, Beaufort, Dare, Hyde, Martin, Tyrrell, Washington).
- 2 Eastern (Carteret, Craven, Jones, Onslow, Pamlico, Duplin, Edgecombe, Green, Lenoir, Nash, Pitt, Wayne, Wilson).
- 3 Southeast (Brunswick, Columbus, New Hanover, Pender, Bladen, Cumberland, Hoke, Richmond, Robeson, Sampson, Scotland).
- 4 Triangle (Franklin, Harnett, Johnston, Vance, Wake, Warren, Chatham, Durham, Granville, Lee, Moore, Orange, Person).
- 5 Triad (Alamance, Caswell, Guilford, Montgomery, Randolph, Rockingham, Davidson, Davie, Forsyth, Stokes, Surry, Yadkin).
- 6 Carolinas (Alexander, Catawba, Cleveland, Iredell, Rowan, Anson, Cabarrus, Gaston, Lincoln, Mecklenburg, Stanly, Union).
- 7 Western (Alleghany, Ashe, Avery, Buncombe, Burke, Caldwell, Clay, Graham, Haywood, Henderson, Jackson, Macon, Madison, McDowell, Mitchell, Polk, Rutherford, Swain, Transylvania, Watauga, Wilkes, Yancey).

Chart 20 - Hotel/Motel Statistics by Economic Development Region - June 2009

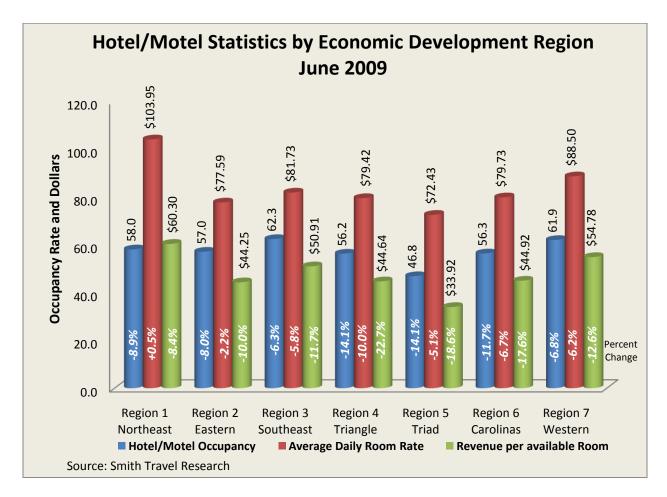

Chart 20 provides lodging indicators for June 2009 by economic development region. Also shown are percent changes from June 2008. This graph allows individual regions within the state to track indicators specific to their general destinations, while still being able to compare their data to the state data shown in Section 1.

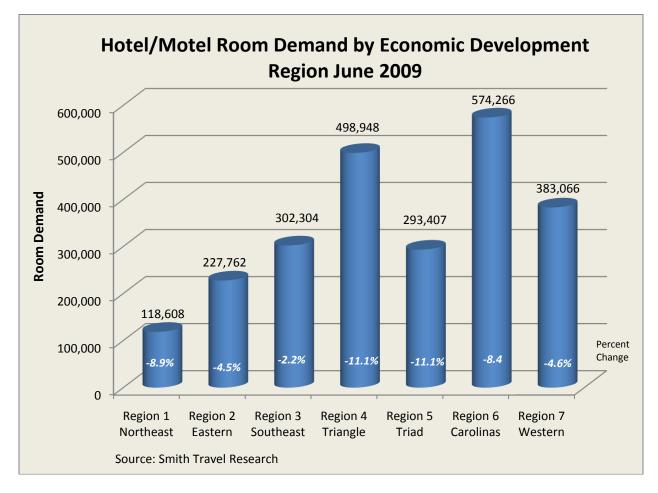

Chart 21 depicts hotel/motel demand for the month of June 2009 by economic development region. Demand is the number of rooms sold excluding complimentary rooms. In June, all regions showed a negative percent change from June 2008.

Section 4: National Travel Price Index

The Travel Price Index (TPI) measures the seasonally unadjusted inflation rate of the cost of travel away from home in the United States. The TPI is based on U.S. Department of Labor price data collected for the monthly Consumer Price Index (CPI). The TPO is released monthly and is directly comparable to the CPI.

Variables included in calculating the TPI:

Recreation Services Food and Beverage Alcohol Away From Home Food Away from Home Other Lodging (Include Hotel/Motel) Transportation

Airline Fares Intra-city Public Transportation Motor Fuel Other Intercity Transportation

Chart 22 – National Travel Price Index December 2006 – June 2009

Chart 22 provides a two year trend of the National Travel Price Index (TPI). Steady growth was experienced through mid-2008; however in November 2008, it is clear that as the TPI fell below 2007 levels, the tourism industry began feeling the full effect of the recession. Into 2009, the June TPI remained well below the 2008 index level and is remaining slightly below the 2007 level after dropping below in March.
